

WORLD CANCER DAY 2025 #UnitedByUnique

World
Cancer Day
4 February

UNITED
BY
UNIQUE*

THEME: **“UNITED BY UNIQUE”**

The Cancer Association of Zimbabwe joins the international community and the Ministry of Health and Child Care (MoHCC) in commemorating World Cancer Day 2025, which is commemorated on the **4th of February** every year. This year's World Cancer Day (WCD) commemoration theme is **“UNITED BY UNIQUE”**. This theme runs from the year 2025 to 2027 and emphasizes the importance of personalized care and treatments to cater for each individual's unique needs. The uniqueness in how individuals experience cancer calls for an adaptive approach to the fight against cancer. The various cancer experiences across the globe show gaps in cancer care hence the need for united efforts in fighting cancer. It calls upon everyone to act accordingly in the prevention and control of cancer by focusing on reducing various inequalities in cancer care. The theme reminds us of the need to work together to promote “Health Equity” in cancer care. In Zimbabwe, there are various gaps in the cancer care continuum from diagnosis to survivorship. Access to cancer information and appropriate management services remain limited. The theme **“UNITED BY UNIQUE”** calls for individuals, corporates, civil society and government, all uniquely experiencing cancer, to unite and commit themselves to the reduction of the global cancer burden through improving comprehensive cancer care to all and tailor make cancer interventions to address the unique needs of individuals. This call is in line with Zimbabwe's current drive towards universal health coverage (UHC) by 2030. The UHC should be expanded to include cancer care and equitable access to health services.

CANCER AWARENESS AND CANCER LITERACY LEVELS: There are cancer knowledge level gaps in Zimbabwe because of common cancer myths and misconception. Health education is more pronounced on communicable as compared to non-communicable diseases. The lack of knowledge leads to delayed presentation of cases at health institutions. Zimbabwe National Cancer Registry (ZNCR) reported that over 80% of the cases were diagnosed at advanced stages in 2019. Increase in cancer awareness can empower people to recognize early warning signs, make informed choices about their health and counter their own fears and misconceptions about cancer.

At least one third of the cancers are preventable, hence there is need to champion healthy choices to prevent and reduce cancer risk factors. Healthy lifestyle is helpful in reducing the risks of developing cancers:

- ❖ Tobacco and alcohol use account for 27% of the cancer deaths. Reducing the rates of tobacco and alcohol use including drug and substance abuse will significantly decrease the global cancer burden.
- ❖ Alcohol use has been linked to cancers of the mouth, pharynx, larynx, esophagus, bowel, liver and breast.
- ❖ Overweight and obesity are strongly linked with an increased risk of bowel, breast, uterine, ovarian, pancreatic, esophagus, kidney, and gallbladder cancer later in life.

Cancer awareness helps in enabling healthy choices to reduce the risks associated with cancer.

EARLY DETECTION, TREATMENT AND PALLIATIVE CARE SERVICES: Over the years, Zimbabwe has improved accessibility to screening of common cancer particularly cervical cancer. However, there are still pronounced gaps in the provision of screening for other common cancers such as prostate, breast and colon cancers. The prohibitive user fees, centralization of cancer screening and treatment services and constant breakdown of radiotherapy machines reduce accessibility to these vital lifesaving cancer services.

- ❖ Life-saving cancer diagnosis and treatment should be equal for all – no matter who you are, your level of education, level of income or where you live in the world.
- ❖ The availability, affordability and accessibility of cancer services need to be improved. Early detection, diagnosis, treatment and palliative care services should be accessible to every citizen. This is important in protecting individuals and families from financial hardship because of out-of-pocket medical expenses.

AVAILABILITY, AFFORDABILITY AND ACCESSIBILITY OF ESSENTIAL CANCER MEDICINES: MOST OF the common cancers in Zimbabwe can be treated, however, the cost of medication is unbearable to patients. Cancer medicines are mostly available in private pharmacies where prices are pegged in foreign currency. Very few patients are on private medical

insurance, which partially covers the medication expenses. Most patients pay for their medication through out-of-pocket expenditures resulting in failure to even commence or complete the prescribed treatment regimes.

- ❖ Essential cancer medicines (WHO model list) should be availed through public health pharmaceuticals and to be accessed at pharmacies at public health institutions across the country.
- ❖ Social protection such as Assisted Medical Treatment Orders (AMTOS), medical travel warrants and food vouchers for vulnerable cancer patients such as patients without medical insurance, persons with disabilities, children and the elderly seeking cancer treatment, to be revived and sustained.

FUNDING AND RESOURCE MOBILISATION FOR CANCER: Cancer control is both capital and technologically intensive hence the need for sustainable local and international fundraising initiatives. It makes a lot of economic sense for a nation to invest in cancer prevention and control than dealing with the consequences. Failure to invest in cancer prevention means that the nation will not be able to cope with the increase in the cancer cases and this will retard development due to increased health spending. Cancer burden, if not controlled is likely to retard Zimbabwe's progress towards achieving the Sustainable Development Goals. Government investment in cancer prevention and control will lead to increased productivity and improved quality of life. Introduction of sin and sugar taxes by the government of Zimbabwe is a step in the right direction bearing in mind the current dwindling of external health funding.

COORDINATION OF NATIONAL CANCER PROGRAMMES

Zimbabwe cancer burden is increasing every year (ZNCR) and this calls for the need to have a national coordination mechanism that oversees the national cancer interventions to sustain the progress made so far and harness the current global innovations and opportunities in cancer care. This is because cancer is a unique disease, and its management is both capital and technological intensive hence requires a separate coordination mechanism at higher administrative levels. Discussions on whether a "cancer council" or "national cancer forum" suffices should be initiated and debated upon until a strong and well interrogated "national cancer coordination mechanism" is arrived at. The coordination mechanism will make sure that the recently introduced cancer-related levies and taxes are used for cancer care in a transparent manner.

The theme "**UNITED BY UNIQUE**" calls for unified efforts in addressing specific gaps and disparities in cancer care across the globe to promote health equity. Our unique cancer stories/experiences should shape and guide us towards our vision, universal cancer care. [#UniqueInOurStoriesUnitedInOurVision](#)

We therefore take this momentous opportunity to urge government and its partners, members of the public and other stakeholders, to step up efforts towards prevention and control of cancer and improving the quality of life of those diagnosed with cancer.
